Stainless Steel threaded rods are widely used in construction environments where corrosion is not allowed. Otherwise stainless steel rods are not suitable in special environments such as swimming pools and stable industry. For this type of application it is better to use carbon steel with special coating such as Duplex.

Other lengths on request.

* DUPLEX is a high anti corrosion system stronger than zinc plated or HDG, please visit www.duroc.be for more information.

Stainless steel rods can be produced from different grades. Standard AISI 304 (A2-70) and AISI 316 (A4-70 or A4-80) are the most common qualities.

Stainless steel threaded rods are expensive products. We ensure you the right grade according the standards. With a high constant quality and availability.
